02/2011 - 11/2012

Queensland, AUS

University of Queensland

Bachelor of Science

02/2006 - 11/2008

Queensland, AUS

PROJECTS

Ecoliday - Personal travel carbon emissions calculator

I was part of a production team working in an agile way to bring this project to life. I was involved in every step from concept to design and implementation. This FullStack web application was built using the MERN stack to to enable people to make a more environmentally informed decision when planning a holiday. It provides users with estimated CO2e emissions for different destinations and vehicle types as well as suggesting local alternatives

Mr Bloggy - Social media app

Fullstack blog app designed for sharing and discussing your favourite things with friends. This project showcases my ability to utilise modern web technologies to develop engaging and collaborative applications. With its intuitive user interface and seamless integration with Firebase, Mr Bloggy is an excellent example of my ability to design and implement scalable web applications.
